

Mike Miner, P.G., Ph.D., is Director of Applied Geosciences at The Water Institute located in New Orleans. He received his B.S. and M.S. in Geology from The University of Mississippi and his Ph.D. from the University of New Orleans in Engineering and Applied Sciences with a focus on Coastal Geology. Mike has extensive experience working across the Gulf and Atlantic coasts collaboratively with government agencies, private firms, and university researchers to develop science-based approaches to improving coastal and river management strategies. Much of his work has focused on sediment management for large-scale restoration programs including the largest barrier island project ever constructed: Mississippi Coastal Improvements Program (MSCIP) Comprehensive Barrier Island Restoration. Prior to joining the Water Institute in 2018, Mike worked at Bureau of Ocean Energy Management and developed the Gulf-Wide Sand Inventory Program to quantify recoverable offshore sediment resources reserves for coastal restoration programs. He is presently lead investigator on multiple applied research projects including the Lowermost Mississippi River Management Program, Texas Offshore Sediment Management Plan, and Louisiana Sediment Management Plan Implementation.
